RADIOGRAPH CHEST AP SUPINE VIEW (PORTABLE)

TT is noted.

NG tube is seen in situ.

Mild cardiomegaly is seen.

Bilateral perihilar congestion is seen.

Visualized both lung fields appear normal.

Soft tissues appear unremarkable.

Clinical correlation is indicated.

Deep

DR. Deep Vora
MBBS, DNB

All investigations have their limitations. Solitary radiological and other investigations do not confirm the final diagnosis of the disease. These investigations only help in diagnosing the disease in correlation to clinical symptoms and other related tests. For arriving at final and conclusive diagnosis other tests may be required.

Final Report

Patient Name	: BABY OF TARANNUM MISHRA	Order Date	: 08/05/2023 09:37 AM
Age / Sex	: 5 Months / Female	Sample Collection	: 08/05/2023 09:48 AM
UHID	: WHNM.0000367117	Report Date	: 08/05/2023 11:58 AM
Primary Consultant	: DR. ANKIT GUPTA	Specimen	: Citrate Plasma
Order No.	: 4933	Bed No.	: ICU3-10
IP No.	: IP2.0009544		

PARAMETER	METHOD	RESULT	UNIT	B.R.I
Activated PTT(APTT)- Citrate Plasma				
Activated PTT	Electro-magnetic mechanical method	48.92	Secs	28.7-36.2
Activated PTT-Control	Calculated	31.5	Secs	
Remark	Rechecked and confirmed with same sample. Kindly correlate clinically.			

Fibrinogen- Citrate Plasma

Fibrinogen	Electro-magnetic mechanical method	171.00	mg/dL	200-400
------------	------------------------------------	--------	-------	---------

Interpretation - Fibrinogen

Depressed fibrinogen levels are observed in:

-Acquired hypofibrinogenemia or afibrinogenemia due to intravascular proteolysis of fibrinogen by thrombin (consumption coagulopathy e.g. in obstetrics, following surgical intervention), snake venom or plasmin (primary hyperfibrinolysis following therapy with streptokinase, urokinase or tPA). Moreover, moderate hypofibrinogenemias can occur in the case of reduced production (in acute or chronic liver diseases), loss of intravascular volume (e.g. with ascites or acute bleeding as well as with erythemas) or in case of increased breakdown (with shock or carcinomas).

-Congenital hypofibrinogenemia and afibrinogenemia.

Temporary elevated fibrinogen levels are observed as a result of fibrinogen responding as an acute phase protein in:

-Transitory hyperfibrinogenemias may occur following surgery, trauma, heart attack and infections.

-Longer lasting hyperfibrinogenemias may be detected in neoplasias and chronic inflammatory illnesses.

A slight increase in the level of fibrinogen is observed with increase in age. Elevated fibrinogen levels are a risk factor for cardiovascular disease.

Limitations of the Procedure:

Results obtained may be affected by the presence of heparin or fibrino(geno)lytic degradation products in the patients plasma. Significant levels of either of these substances may cause the test to indicate a falsely low fibrinogen level. Results of this test should always be interpreted in conjunction with the patients medical history, clinical presentation and other findings.

Prothrombin Time (PT) - Citrate Plasma

Prothrombin Time Test	Electro-magnetic mechanical method	46.8	Secs	11.3-13.7
-----------------------	------------------------------------	------	------	-----------

ECHOCARDIOGRAPHY REPORT

NAME	: BABY OF TARANNUM MISHRA
AGE /SEX	: 3MONTHS /FEMALE
PATIENT ID	: UHMR00367117
DATE OF EXAMINATION	: 07.05.2023
REFERRED BY.	: DR. ANKIT GUPTA
ECHOCARDIOGRAM DONE BY	: DR. ASHISH MISHRA

Visceral and Atrial Situs Solitus
 SDS
 SVC and IVC drain into RA.
 3 Pulmonary veins drain into LA
 large ASD -ostium primum amounting to common atrium
 Large inlet VSD
 Common AV valve with moderate regurgitation gmax = 84 mmHg
 PA band in situ → Gmax =48 mmHg
 Confluent pulmonary arteries, dilated proximal MPA, RPA, LPA
 'D' shape of ventricle
 RV grossly dilated
 VA concordance
 Normally Related Great Arteries
 No LVOT/ RVOT gradient.
 Arch could not be assessed
 DTA (abdominal) pulsatile
 No Coarctation of Aorta.
 No PAH
 No e/o PDA

Final Diagnosis

S/P PA banding + PDA ligation (Feb 2023)
 PA band seen in situ (gradient 48mmHg)
 Complete AVCD with moderate AV Valve regurgitation(Gmax 84 mmHg)
 Dilated MPA and proximal pulmonary arteries
 Good Biventricular systolic function
 No vegetation /mass/effusion.
